## **DETAILED ACTION**

### ***Election/Restrictions***

Restriction is required under 35 U.S.C. 121 and 372.

This application contains the following inventions or groups of inventions which are not so linked as to form a single general inventive concept under PCT Rule 13.1.

In accordance with 37 CFR 1.499, applicant is required, in reply to this action, to elect a single invention to which the claims must be restricted.

Group I, claim(s) 1-4, 12, 13, 14, and 37 drawn to compositions comprising an active Src protein.

Group II, claim(s) 1, 5-14, and 38, drawn to compositions comprising an inactive Src protein.

Group III, claim(s) 1-4, 12-16, 33, and 34, drawn to compositions comprising a nucleotide sequence capable of expressing an active Src protein.

Group IV, claim(s) 1, 5-16, 35, and 36, drawn to drawn to compositions comprising a nucleotide sequence capable of expressing an inactive Src protein.

Group V, claims 17-20 and 28-30, drawn to methods of potentiating angiogenesis by administering a composition comprising an active Src protein.

Group VI, claims 17-20, and 28-32 drawn to methods of potentiating angiogenesis by administering a composition comprising a nucleic acid encoding an active Src protein.

Group VII, claims 17 and 21-30, drawn to methods of inhibiting angiogenesis by administering a composition comprising an inactive Src protein.

Group VIII, claims 17 and 21-32 drawn to methods of inhibiting angiogenesis by administering a composition comprising a nucleic acid encoding an inactive Src protein.

Claims 1-14, 17-32 have been assigned to more than one group because each of these claims comprises more than one invention. Applicant is advised that these claims will be examined only to the extent that they are defined by the elected invention.

Art Unit: 1635

The inventions listed as Groups I-IV do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, they lack the same or corresponding special technical features for the following reasons:

The technical feature that links the independent claims is a composition comprising a Src protein or a nucleic acid encoding a Src protein. However, this technical feature cannot be a special technical feature under PCT Rule 13.2 because it does not constitute a contribution over the prior art. For example, Zang et al (J. Biol. Chem. (1997) 272(20): 13275-13280) teaches an inactive version of SRC with a Y527F mutation, and a nucleic acid expression vector encoding this Src protein. See e.g. sentence bridging pages 13275 and 13276. Because the technical feature linking the independent claims cannot be a special technical feature under PCT Rule 13.2, a lack of unity exists.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
